

Illingworth Research Group Limited is a full service clinical CRO with experience across all phases of development from Phase I / proof of concept studies to post-marketing studies for small molecules, biotechnology products, medical devices and diagnostics. Illingworth has a network of clinical infrastructure covering most therapeutic areas varying from clinical research units, primary, secondary and tertiary care sites across Europe and with partners in North America and our own offices and infrastructure in Australasia.

Illingworth is accustomed to working with smaller companies that perhaps have only limited clinical development resource internally. We guide our clients through every step of the clinical development process so that the project can be completed in a timely and efficient manner.

Key service offerings:

- Protocol design
- Feasibility and site selection
- Site contracts and budgets
- Legal representation for the EU
- Patient recruitment
- Off-site research nursing (home, school and workplace visits)
- Clinical monitoring
- Study report writing
- Project management
- Clinical Trial Administration
- GCP audits
- Medical photography
- Research nurse site support

Illingworth offers two niche services which differentiate it from other CROs. One is the provision of mobile research nurses for patient homecare to support studies for optimisation of patient recruitment, retention, and compliance. This means that patients can receive their clinical trial treatments and procedures within their own home, school or workplace and results in studies being completed quicker, especially for orphan indications. We can also provide research nurses to work at the sites, assisting the PI with patient identification, study procedures and data collection.

The other niche service is medical photography. In some studies such as those in the dermatology space, diabetic foot ulcers or venous leg ulcers, a photographic image may be one of the study endpoints and the challenge is to standardise the images from site to site. Our system is compatible with EDC, is fully 21CFR Part 11-compliant and is not only useful for photographic study endpoints, but also for marketing purposes where photography can demonstrate the benefits of a product.
